

HantsWight and Flooding Risks

Flood risk is now a fact of life in the UK. Reports of flooding are now on average twice as frequent as they were one hundred years ago in the UK, and experts from the Met Office and world leaders in climate change predict we could see a significant increase in flood risk in the coming years.

Our free flood screening service

To help our solicitor clients identify any potential flooding hazards, we now screen properties using data provided by Landmark Information Group.

Once logged into our client ordering area, all you need to do is select the “flood checker” option which can be found at the top of the residential and commercial ordering pages.

When dealing with your order one of our team will check the property in question against the data supplied by Landmark. If we identify a risk within 250 meters of the property we will send you an email immediately.

The email will notify you of the risk and it will also suggest the purchase of the Homecheck Professional Flood Report. The full flood report will give you a good understanding of the potential flooding risk attached to the property, by using a number of datasets from:

The Environment Agency
British Geological Survey
Norwich Union
Risk Management Solutions (RMS)
Crawford & Company

Ordering the flood report is simple. You can send us the request via return email or log into our online ordering platform.

If you have any questions around the flood screening service or on flooding risks in general, please contact us on 02392 831 777, or admin@hantswight.co.uk
